ADHEREPOD

Voice-first medication adherence for chronic disease patients.
No screens. No confusion. Just talk.

A pre-configured, LTE-connected tablet that manages medications through natural conversation — built for the people who need it most.

THE PROBLEM

Medication non-adherence is one of the most expensive and preventable problems in healthcare.

50%
of chronic disease patients don't take meds correctly

1 in 4
ER visits caused by medication errors

$528B
annual cost of non-adherence in the U.S.

- Seniors managing 5+ medications struggle with complex regimens
- Existing tools require smartphone literacy most patients don't have
- Caregivers and providers lack real-time visibility into adherence

MARKET OPPORTUNITY

The medication adherence market is massive, fragmented, and underserved by technology.

$22B+ Market

Global medication adherence market projected by 2028, growing at 14% CAGR

131M Americans

Take at least one prescription drug daily — the majority are over 65

No Clear Leader

No brand dominates consumer mindshare for medication management

Employer Demand

Self-funded employers actively seek cost containment strategies for drug spend

OUR SOLUTION

A voice-native AI health companion — shipped ready to use, no setup required.

Voice-First

Natural conversation — no typing, no screens, no app to download. Supports multiple languages.

Camera Intake

Hold up prescriptions, pill bottles, or after-visit summaries. The device reads and records everything.

Pre-Configured

LTE-connected tablet arrives ready to use. Plug in and start talking. No WiFi setup needed.

Interaction Alerts

Automatically flags dangerous drug interactions and cross-references all medications.

Health Records

Builds a complete medical history through conversation — across doctors and visits.

Provider Portal

Real-time dashboards for physicians and care teams. Adherence data at a glance.

HOW IT WORKS

1
Receive
Your AdherePod tablet arrives pre-configured and pre-logged-in. Just plug it in.

2
Import
Show pill bottles, prescriptions, or doctor documents to the camera. Talk to set up reminders.

3
Stay on Track
Daily voice check-ins, medication reminders, and care team oversight keep patients adherent.

"AdherePod, what pills do I take this morning?" — "AdherePod, my doctor just prescribed something new. Can you check for interactions?"

COMPETITIVE LANDSCAPE

The market has solutions — but none built voice-first for the people who need help most.

Pill Reminder Apps

Require smartphone literacy, manual data entry, and ongoing engagement. Low retention among seniors.

Smart Pill Dispensers

Hardware-only, no AI intelligence, limited to dispensing — can't capture health data or answer questions.

Care Navigation Firms

Human-intensive, expensive to scale. Can only handle so many patients per coordinator.

PBM Programs

Carrier-driven adherence programs are rigid, lack personalization, and serve the PBM's interests first.

AdherePod's edge: Voice-native AI that enhances existing programs — not a replacement, but a force multiplier for care teams, employers, and patients alike.

GO-TO-MARKET

We're exploring partnerships across the healthcare benefits ecosystem to offer AdherePod as an employee or member benefit.

Self-Funded Employers

Employers using independent TPAs have the flexibility to customize benefits and directly measure cost savings from improved adherence.

PBM Consultants

Independent PBM consultants advise employers on drug management — AdherePod enhances their cost containment strategies.

Provider Networks

Physician groups and health systems gain real-time adherence data between office visits, improving outcomes and reducing readmissions.

Payers & Insurers

Health plans can reduce costs through verified adherence and early intervention, with data-driven ROI measurement.

BUSINESS MODEL

B2B2C through enterprise healthcare partnerships.

Per-Member Subscription

Employers or payers subscribe on a per-member-per-month basis. Pricing scales with population size.

Device + Platform

Pre-configured tablets bundled with the AI platform. Hardware margin plus recurring SaaS revenue.

Pilot Programs

Targeted 90-day pilot engagements with enterprise partners to validate outcomes and measure ROI before full rollout.

Data & Insights

Aggregated, de-identified adherence analytics for population health management and care optimization.

THE TEAM

Head of Product

Gage Clifton

Visionary founder passionate about simplifying medical adherence. Deep experience working with the nation's largest health insurance companies.

Head of Engineering

Andrew Furman

AI developer with deep expertise in LLM integrations and voice agents. Former PwC consultant building software for UnitedHealthcare, Aetna, and BCBS.

Head of Partnerships

Tyler Kaufman

Strategic partnerships leader with deep experience in performance marketing and revenue growth across healthcare and technology sectors.

LET'S TALK

We’re looking for enterprise partners to bring voice-first medication adherence to the people who need it most.

What We’re Looking For

Pilot partnerships with forward-thinking employers, payers, provider networks, and PBM consultants ready to improve outcomes and reduce costs.
